

Is that Cat Feral?

Tips and Myths about Feral Cat Behavior

Margaret Slater, DVM, PhD

Senior Director of Veterinary Epidemiology

Shelter Research and Development

ASPCA

The ASPCA research team:
Dr. Katherine Miller, Dr. Laurie Garrison,
Natasha Drain, Dr. Kathleen Makolinski, Dr. Emily Weiss

Poll: Can you tell if this cat is socialized?

Submit your answer in the poll box on the right.

- a) Yes, this cat is socialized.
- b) No, this cat is unsocialized.

Topics Today

- What we thought we knew about behaviors to identify Socialized Cats
- Behaviors or characteristics that don't do a good job of predicting socialization level
- Behaviors unique to more socialized cats
- Cat behavior in shelters
- Next steps

The Fear Factor

Feral?

Semi-socialized?

Socialized pet?

Fear factor

How do we tell the difference?

Socialization

Level of fear/comfort with humans:

Least Socialized

extremely frightened of humans and unaccustomed to their close proximity

Most Socialized

extremely accustomed to interacting with humans and very comfortable with them

NOT adoptability or aggression

HOW DID WE ELICIT BEHAVIORS FROM CATS?

Four Observation Periods

Day 1		Day 2		Day 3
AM Intake	PM	AM	PM	AM

Four Interactions/Assessments In a Cage

Four Assessments

- Greet & extend hand to cat, cage condition
- Crack cage door open
- Jiggle string toy at front
- Stroke and push with a rod

Crack Cage Door Video

Stroke/Push with Rod Video

What are some specific cat behaviors you or your organization use to identify socialized cats?

Type them into chat.

What we THOUGHT was important

Vocalization:

Meow/purr vs. hiss/growl

Aggression:

Paw raise, swat, lunge

Cage messiness:

Litter box dumped, torn up bedding

Licking lips or nose:

Social behavior

Blinking with eye contact:

Social behavior

Example: Stroke/Push with Rod

Percentage of cats who meow/purr

Example: Stroke/Push with Rod

Percentage of cats who growl/hiss

What we THOUGHT was important

Stretch:

Social behavior

Approach toward front of cage:

Social behavior

Sniff:

Affiliative behavior

Stiffen/flinch with touch with rod:

Less socialized behavior

Example: Greeting

Percentage of cats who blink with eye contact

WHAT DO ONLY SOCIALIZED CATS DO?

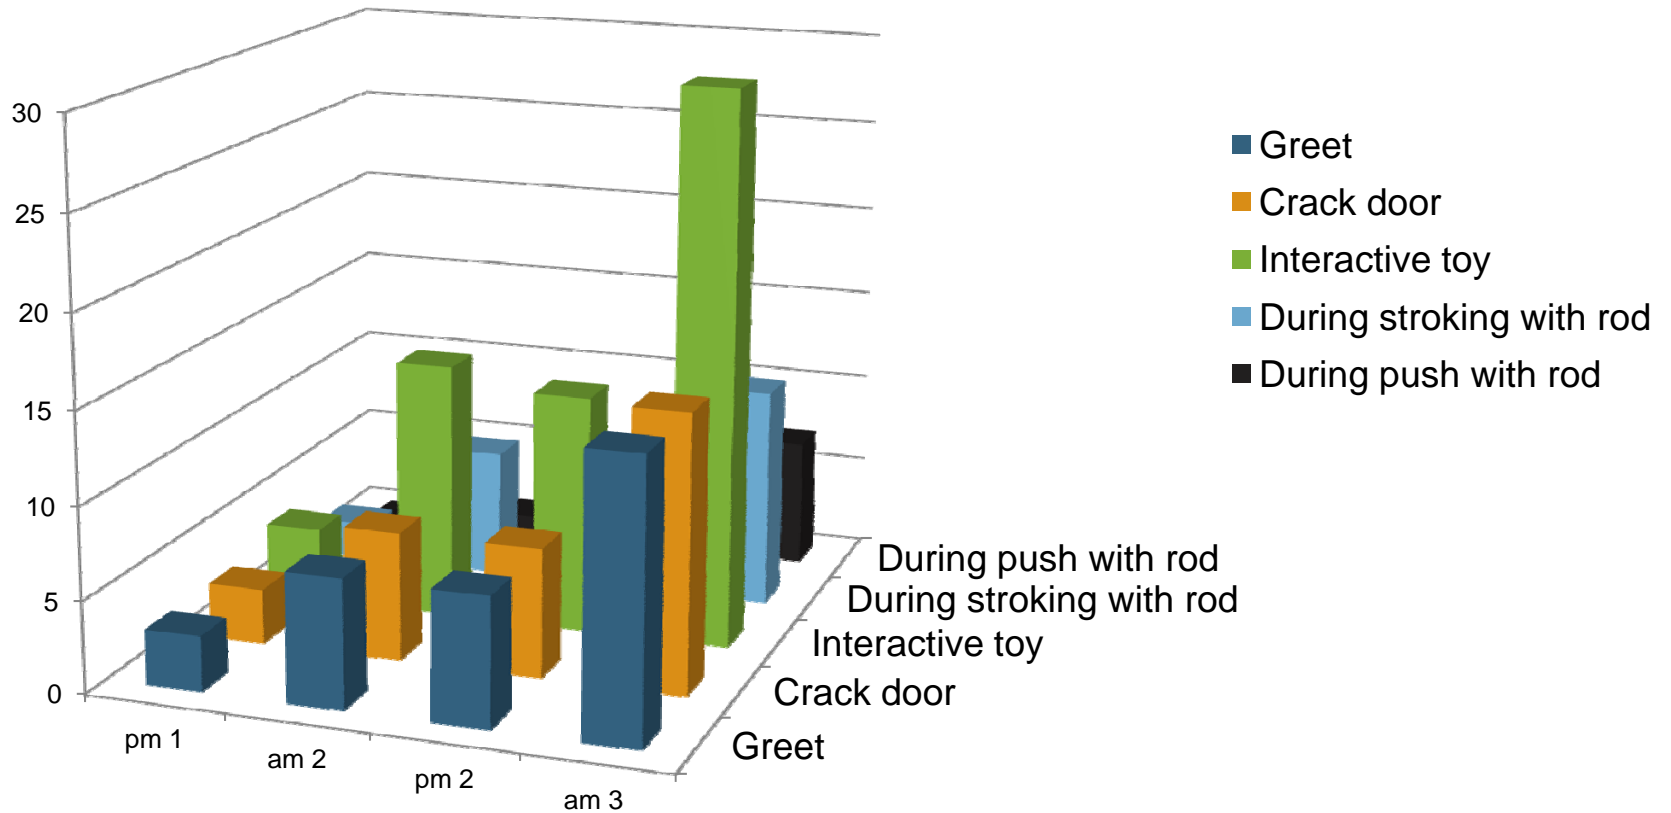

Obvious Ones: if do once = socialized

- Chirp
 - Rub
 - Knead
 - Touch
 - Play
-
- At the front of the cage
 - Tail up in the air

Touching...

Percentage of more socialized cats who touch

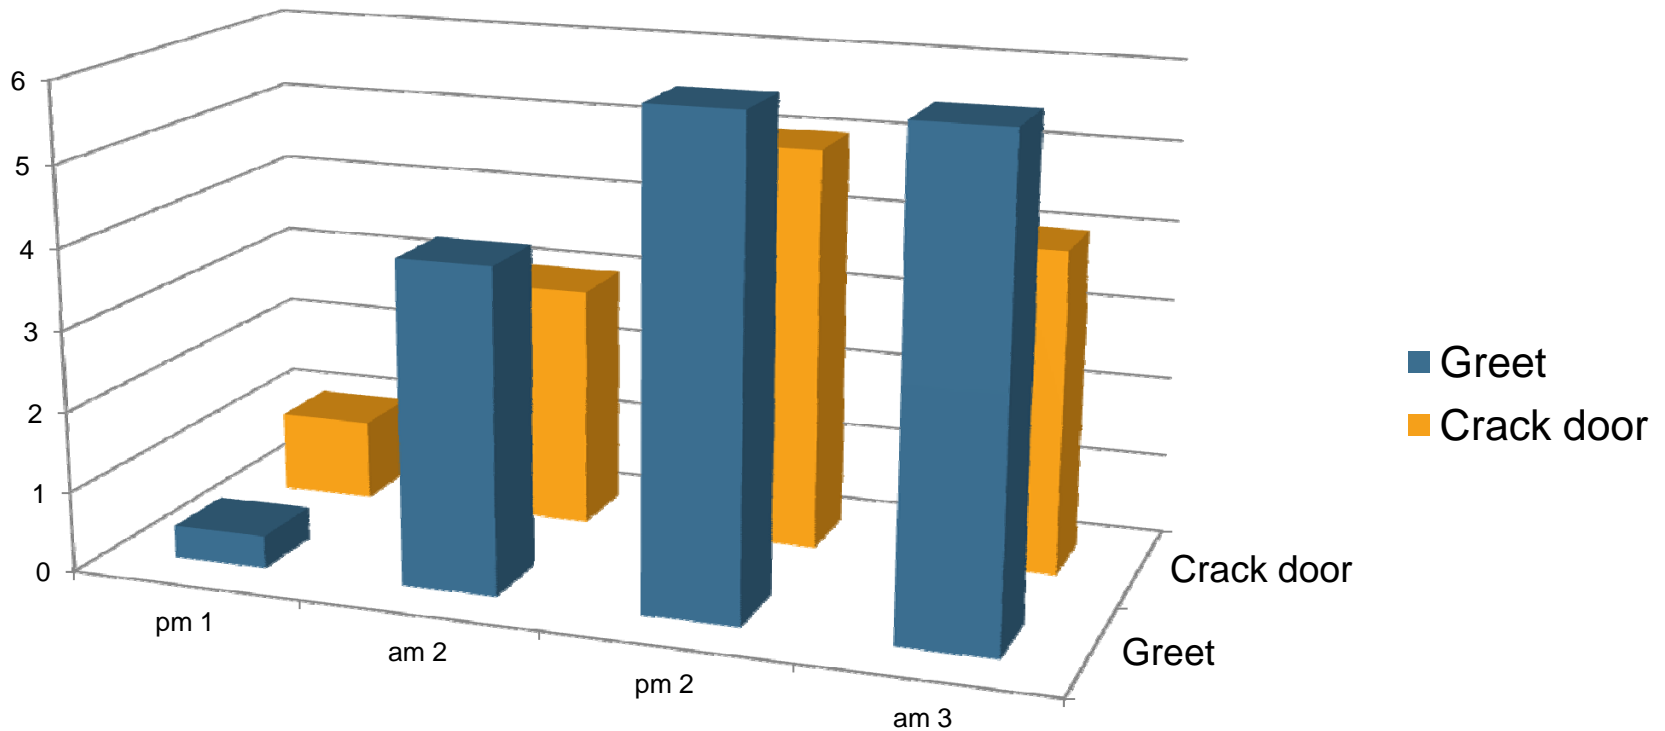

Less Obvious: need to do 4 or more = socialized

- Yawn
- Groom/shake
- Approach toward front of cage
- Sniff
- Roll
- Reach
- Standing or still moving around in the cage

Most Common Assessments for Rolling

Percentage of more socialized cats who roll

Example: Stroke with Rod

Percentage of cats who sniff

Example: Crack Door

Percentage of cats who yawn

BUT:

- Not all socialized cats did these behaviors

Didn't do every time period

more than ½ did NOT do on first day

Didn't do in all assessments

- Probably won't see if shy or not very demonstrative or "needy"

Poll: Which of these less obvious behaviors did you find most interesting or surprising?

Submit your answer in the poll box on the right.

- a) Yawn
- b) Groom/shake
- c) Approach toward front of cage
- d) Sniff
- e) Roll
- f) Reach
- g) Standing or still moving around in the cage

SOME OTHER IMPORTANT THINGS WE LEARNED

Next Steps

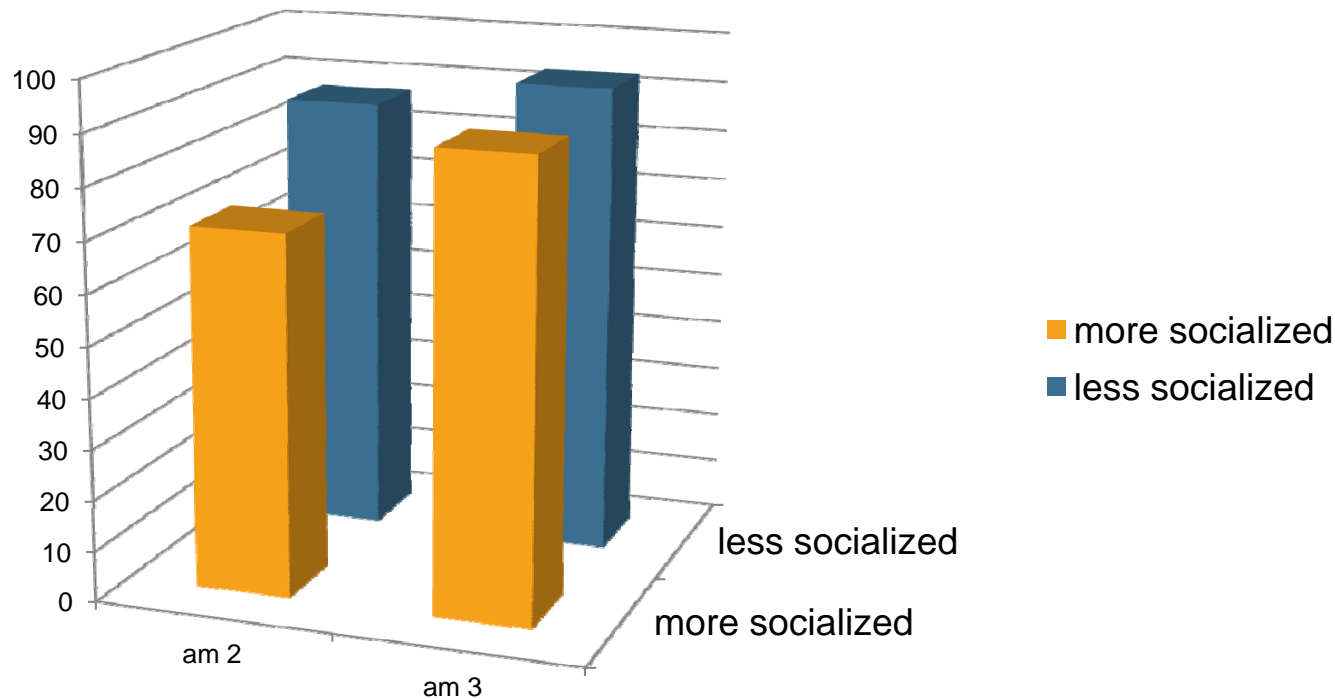

- Evaluate the consistency of different people for in-cage measures
- Put together a training package
- Test in several shelters
- Revise
- Share on ASPCApro.org

Welfare Implications

Cats eat during the night in the dark and quiet
Cats use their litter boxes then too

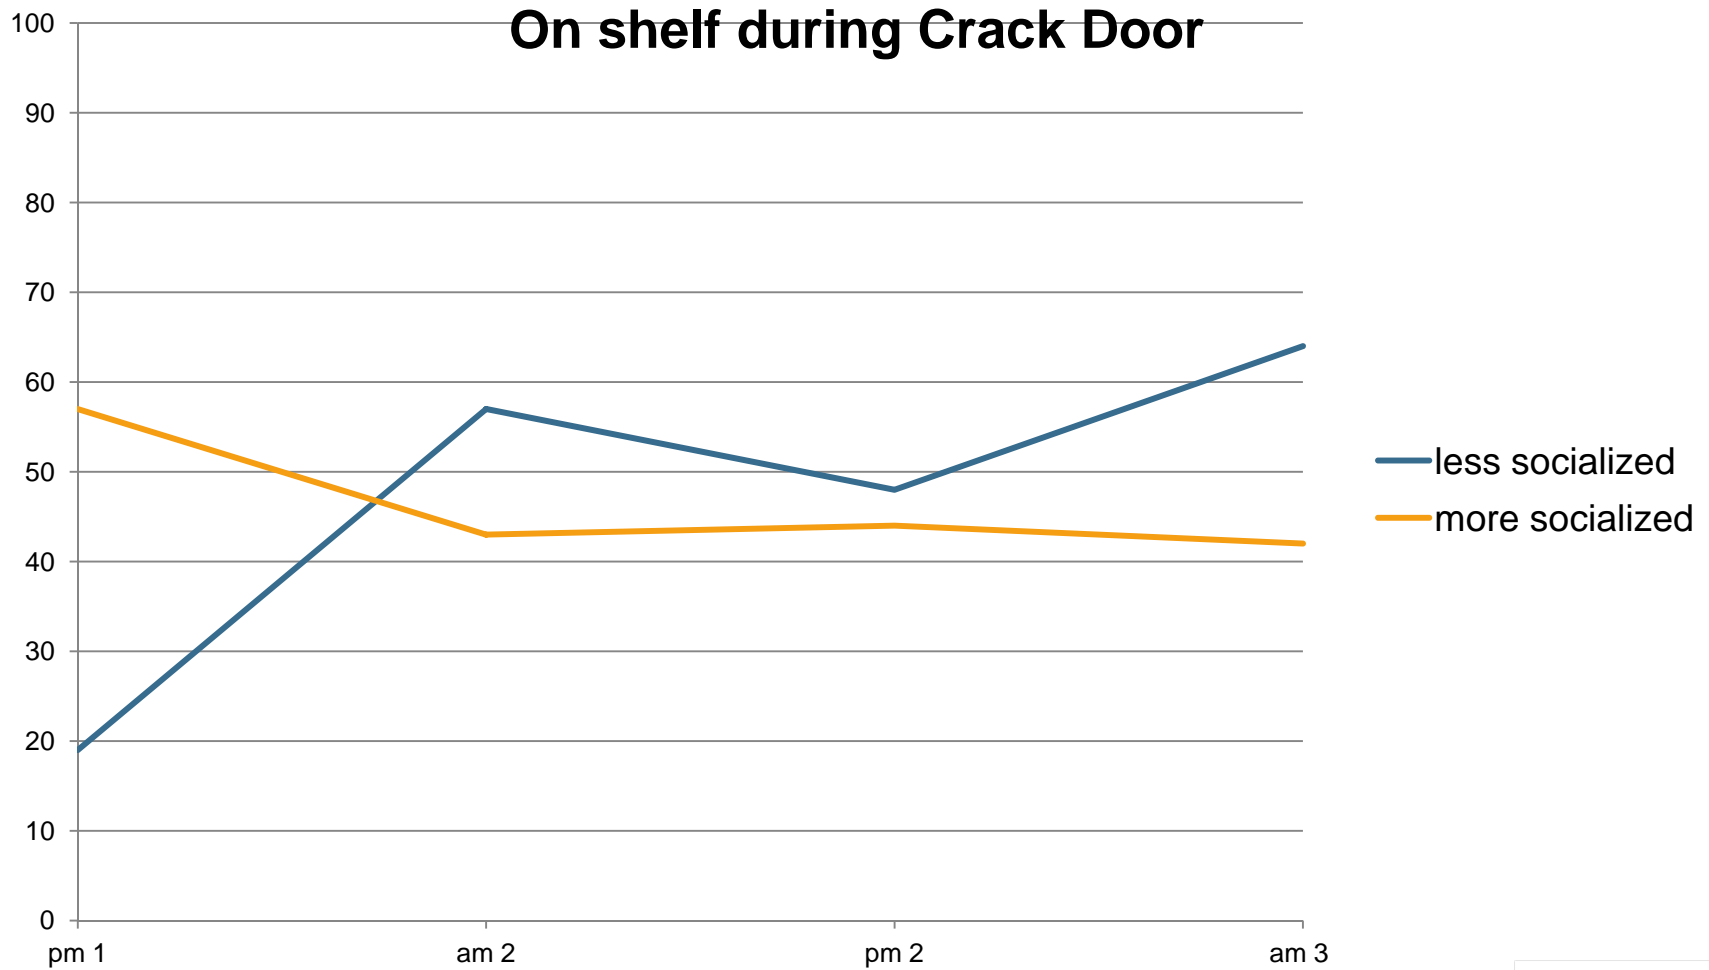

Percent of cats who ate during the night

Bed and Shelf

Soft Bed and Shelf or Kuranda Bed Used
